The program was created in 2013 by the International Academy of Science, a nonprofit organization based in Kansas City, Missouri. With over 250 courses available, Acellus Academy offers students a flexible learning environment that caters to individual needs. ##### Key Features Acellus Academy combines instruction from accredited teachers with technology that tailors course content to each student's learning style. The program uses a tiered form of instruction, providing multiple video lessons and practice problems to reinforce concepts. Parents can choose up to 6 courses at a time for their children. Acellus Academy is accessible from its website or mobile app, available on both iOS and Android devices. ##### Benefits Acellus Academy serves students who seek an alternative to traditional school settings due to various reasons such as medical necessity, interest in rigorous coursework, safety concerns, or the need for a more flexible learning environment. The program has provided education to over one million students across all 50 US states. Acellus Academy provides online courses where students can learn at their own pace under parental supervision. The platform offers hands-on projects, research tasks, and experiments to enhance learning experience. Teachers from reputable institutions are employed to develop the curriculum using grants and funding provided by Acellus. The academy allows parents to monitor their child's progress through an interactive interface. Two graduation plans are offered: a standard pathway that meets state requirements for high school completion and a more rigorous program designed for students aiming for competitive four-year colleges. Acellus uses Prism Diagnostics, which categorizes students based on similar knowledge gaps, and Customized Personal Instruction to address these deficiencies. The system adapts individualized approaches for each student's learning needs. Acellus Special Education courses cater to students with disabilities by breaking down complex concepts into manageable chunks. These are taught via video instruction followed by assessments to gauge mastery. If a concept is not mastered, the system recommends targeted videos to fill the knowledge gap. The Acellus Interactive Learning System has been adopted by over 2,600 schools in the United States for credit recovery programs, dropout prevention, and special education. It also offers advanced courses, including master's and doctorate degrees in research that combine science, engineering, and business. Acellus STEM courseware serves as a catalyst for Career and Technical Education (CTE) programs and utilizes STEM Robotics Labs and curriculum for special needs learners. The Acellus STEM-10 program is a ten-year coding initiative starting from the third grade. Acellus offers a wide range of Advanced Placement courses that are CollegeBoard approved, allowing students to earn college credits while still in high school. These courses are taught by certified AP instructors and are audited by the CollegeBoard to ensure students receive college credit. In addition to AP courses, Acellus also provides Career Technical Education (CTE) courses in 100 different fields, preparing students for specific career pathways. Students can take courses that align with their chosen career path, and the curricula meet state CTE guidelines as well as industry standards. This means that upon completion of these courses, students will be qualified to take industry-recognized certification exams. Acellus provides extensive resources to schools and adult learning centers to help create ideal academic and career training programs. Courses are also available for each core area of the GED, HiSet, and TASC tests. Acellus Academy offers three different tuition plans: Full Tuition, Roger Billings Mentoring Program, and state-funded scholarships for qualifying students. The Full Tuition plan costs \$2,400 per year, while the mentoring program is available at a lower rate of \$699 per year. Additionally, students can apply for state-funded scholarships to cover part or all of their tuition costs. Acellus also provides extensive resources to schools and adult learning centers to help create ideal academic and career training programs.
